

SolarSystem::Core::
Builders::SimulationBuilder
::build_and_run

SimulationStep::execute

SolarSystemAPI::handle
_simulate

SolarSystem::Core::
Builders::SimulationBuilder
::build

```
graph LR; A["SolarSystem::Core::  
Builders::SimulationBuilder  
::build_and_run"] --> D["SolarSystem::Core::  
Builders::SimulationBuilder  
::build"]; B["SimulationStep::execute"] --> D; C["SolarSystemAPI::handle  
_simulate"] --> D;
```

The diagram illustrates a dependency or call relationship. Three separate functions, each in its own box on the left, have blue arrows pointing to a single, larger, shaded box on the right. The functions on the left are 'SolarSystem::Core::Builders::SimulationBuilder::build_and_run', 'SimulationStep::execute', and 'SolarSystemAPI::handle_simulate'. The function on the right is 'SolarSystem::Core::Builders::SimulationBuilder::build'.
