

SolarSystem::JPL::JPLClient
::rebuild_cache

SolarSystem::JPL::JPLClient
::test_storage

SolarSystem::JPL::JPLClient
::save_to_cache

```
graph LR; A[SolarSystem::JPL::JPLClient::rebuild_cache] --> C[SolarSystem::JPL::JPLClient::save_to_cache]; B[SolarSystem::JPL::JPLClient::test_storage] --> C;
```

The diagram illustrates a dependency or relationship between three methods. On the left, two white rectangular boxes represent source methods: 'SolarSystem::JPL::JPLClient::rebuild_cache' (top) and 'SolarSystem::JPL::JPLClient::test_storage' (bottom). On the right, a gray rectangular box represents the target method: 'SolarSystem::JPL::JPLClient::save_to_cache'. Two blue arrows point from the source methods to the target method, indicating that both 'rebuild_cache' and 'test_storage' depend on or call 'save_to_cache'.
